Is this feasible, CharlieMediocrity leads to our demise. It would also take a very long time to scan in a whole manual. If Saturn was ok with it and had them already in PDF format, Id be happy to host them. CharlieProfessional Driver. Preferably in PDF format. So many times we get questions from owners that can be easily answered by reading the owners manuals. Wouldnt you expect it to mention something like that so youd know when your car was running cold or hot. But it doesnt. Instead it says obvious things like if you want to drive the car, put it in Drive, or if you see a cow in the road, hit the brakes, or drive cautiously on icy curvy roads. DUH!!Wouldnt it of taken less time and cost less money to grab a couple people and a couple cars and go out in the parking lot and shoot a few picturesI wanted to know where the temp gauge needle should be under normal conditions. It implemented a spaceframe design, which had been used on some Pontiacs during the 1980s. This meant that the side panels did not carry load and could be made of plastic instead of metal. These polymer panels were dentresistant, something that remained a selling point for Saturn until just a few years before the Saturn brand was discontinued. Significant design updates were made in 1996, 1997, and 2000 for all cars. Although nearly every year of the Sseries existence brought some minor changes to the architecture of the car, each model kept the same basic body styling throughout its respective production period. The SC was only available with the DOHC Dual OverHead Cam engine whereas the SLs had an option for the SOHC Single OverHead Cam engine SL1 or the DOHC SL2. The only difference in each case is the selection of gear ratios, with the SOHCassociated transmissions being geared taller for more efficiency, and the DOHCassociated transmissions having shorter, more closely spaced ratios for performance. As a result, its not uncommon for enthusiastowners to swap a tallgeared MP2 manual into a car equipped with a DOHC engine for better fuel economy on the highway. Aside from the wheel size, it was almost impossible to tell a 1 from a 2 externally, except for the SC2s which had retractable headlamps thru MY 1996.From 1992 to 1996, the first and secondgeneration sedans plus the firstgeneration coupes were sold in Taiwan. From 1997 to 2001, the secondgeneration versions were sold in righthand drive in Japan, and some Toyota Netz dealerships, and former Isuzu dealerships also offered Saturn products until 2001.It was maroon with a tan interior.The SL1 trim level featured the option of the same MP2, or the MP6 automatic transmission.The interior of the vehicle was redesigned with a new dashboard and the addition of a front passengers airbag.

The center console was updated as well, adding previously absent cup holders. Also for 1995, the SOHC LK0 engine was given MPFI to create the 100 hp 75 kW L24 engine.The first generation Saturn SC coupes were originally only available in one trim level which was the SC.For the 1993 model year, the original regular SC coupe model was renamed as the SC2 and a new SC1 trim level was introduced. For the 1994 model year, the SC1 and the SC2 had both gotten revised power door locks and a recalibrated automatic transmission. The first generation SC2 had received a minor refresh in 1995 in which the lower front bumper and the vehicles taillights were both updated. For the 1995 model year, both the SC1 and the SC2 had gotten a redesigned interior with a new redesigned dashboard with a front passengers airbag.The SC1s engine was later upgraded to the 100 hp 75 kW L24 engine for the 1995 model year.The SC1 had also lacked a rear trunk lid reflector and a rear stabilizer bar.They had both featured a completely redesigned exterior. The interior was mostly the same as on the first generation vehicles, while mechanically they went largely untouched. The redesigned second generation Sseries went on sale in 1995 for the 1996 model year.Due to multiple complaints about the noise coming from the vehicles trip odometer that had been in all of the Saturn Sseries since 1995, had replaced with a new type of trip odometer in an effort to correct the problem. For the 1998 model year, a new cluster with a digital trip odometer had been introduced. Rear discbrakes were no longer available as an option on the S series due to high costs

for them as well as very little improvement in braking performance over the conventional rear drumbrakes setup. These changes included revised pistons, new connecting rods, and new crankshaft counterweights in the engine as well.

The Twin Cam cylinder head had now featured a new rollerrocker setup with hydraulic tappets and roller cams replacing the conventional bucket lifter setup of the previous engine in the S series. These vehicles were made to meet the allnew CARB ULEV standards for the 1999 model year. The second generation SC coupes had also moved to the longer wheelbase that the SL sedans and the SW station wagons had used, resulting in an equal wheelbase length across all Sseries models. For the 1999 model year, a frontopening clamshell door was added to the drivers side of the vehicle. Even though this door on the drivers side of the vehicle had allowed easier access into the vehicles rear seat, the drivers seat in the vehicle was also able to slide forward to allow easy access to the vehicles rear seat as well. As a clamshell door, the rear drivers side door could not open unless the front door was open, because the door handle was on the inside of the door itself. Like the first generation SC coupes, the SC1 model lacked a rear sway bar. This resulted in the third generation Saturn Sseries. The rear end of the SL sedans received a redesigned applique on the trunk, and the headlights of the SL sedans had received orange turn signal indicators. In the third generation Saturn Sseries models, the PCM system was used strictly for the vehicles transmission and engine, whereas the BCM system was used strictly for the vehicles interior functions such as the digital trip odometer and speedometer. The optional side curtain airbags were only available on the 2001 to 2002 model Saturn SL1 and SL2 sedans. A new GT trim package had become available for the Saturn SC coupes for the 2001 model year, along with the option of American Racing Wheels that was only available on the GT version of the Saturn SC coupes. A rear spoiler on the vehicles rear trunk lid was also made available for the 2001 to 2002 model year Saturn SC GT coupes.

Options included a sunroof, CD player, and the 4speed automatic with traction control. The package came with a black roof panel, black outside rear view mirrors, black emblems, white face gauges and black accented teardrop wheels. These are extremely rare. These are not to be confused with the regular issue Yellow Sport Coupe. The Saturn SL2 10th Anniversary Edition had included several upscale features that were not available on any other Saturn Sseries vehicles like power windows, leather interior, standard side curtain airbags, and several other upscale features. The Saturn SL2 10th Anniversary Edition had also featured a rear spoiler on the vehicles rear trunk lid. Aside from having the steering wheel on the other side, Japanese market Saturns were also fitted with slightly different light units. The rear lamps had amber turn signals and the front indicators were mounted closer to the corners rather than inboard. Retrieved January 27, 2010. Publications International.
